

To Roberta Willis

I support HB 5300, which will remove the trigger clause from CT's current GMO labeling law. I want to know how the food I am feeding my family is produced.

If GMO food production is so good for us all, let them spend their money to convince us, rather than spending millions to prevent us from knowing. In the meantime I want to know which foods are being produced with these frightening amounts of Glyphosate. In 2012, at least 283.5 million pounds were sprayed on American farmlands, according to the U.S. Geological Survey. (From New Yorker Article, April 10, 2015)

Glyphosate, the active ingredient in **Roundup**, has been classified as a probable carcinogen by the International Agency for Research on Cancer.

Let's have agriculture that is good for the land producing foods that are good for us.

Thank you for your consideration.
